TITLE: Eye injuries caused by electricity

SOURCES: Vojenske zdravotnické listy, no. 5, 1965, 209-213

TOPIC TAGS: ophthalmology, injury, electromagnetic biologic effect

ABSTRACT: Two cases of persons struck by lightning and of one subjected to a current of 22,000 V are described. All suffered eye injuries that became apparent only after a substantial time delay. Cataract was found on the eyes without any signs of inflammation or irritation of the iris or ciliary body. The importance of ophthalmological examinations after injuries by electricity is stressed. AUTHOR: Morar, A. V.

TITLE: The effect of corona discharge on convective heat exchange

SOURCE: AN SSSR. Energeticheskii institut. Fizicheskaya gazodinamika i svoystva
gazov pri vysshikh temperaturakh (Physical gas dynamics and properties of gases at
high temperatures). Moscow, Izd-vo Nauka, 1964 197-213

TOPIC TAGS: heat exchange, convective heat exchange, corona discharge, thermal con-
vection, electroinductive convection

ABSTRACT: The paper describes a continuation of earlier work at the author's laboratory
under the direction of A. S. Prudnikov on the effect of an electric field on heat exchange
between a wire and a coaxial cylinder 15 mm in diameter. The author gives the theory
for convection currents (thermal and electroinductive) in an electric field applied between
two coaxial cylinders and derives a formula for heat transfer in terms of the ratio of the
velocity of the electric wind to that of thermal convection. In these experiments, heating
was carried out solely by thermal conduction through a grounded copper tube 4 mm in
diameter at the center of a charged high-voltage cylinder (L, 110 mm; D, 70 mm). Con-
vection currents were made visible by the use of cigarette smoke. The voltages were

1/1

L 20915-05

ACCESSION NR: AT4045022

varied up to 12-14 kV so as to show conditions between that of a weak corona and a stable arc, the data being recorded with a 12-channel oscillograph. After a test with a solid center rod, a hollow tube with 6 openings (giving 6 gas-candles) was used to show deformations of the flame in the presence of a discharge. The flames were attracted to the positive electrode when plane electrodes were used in place of the coaxial outer cylinder. The results obtained for liquids were contrary to those of Allen who found that the effect was greater in the presence of an alternating than of a steady field. It was concluded that corona discharge intensified heat exchange between a medium and a body by electroinductive convection, the increase being proportional to the ionization of the medium. The effect is independent of the gas used in the case of ammonia, carbon monoxide and air. Formation of a corona in an alternating field has a greater effect on heat exchange than in a steady field. Orig. art. has: 17 figures and 11 equations.

Title : On the Problem of the Role o' Polar Night in the
Disease Rate of Pulmonary Tuberculosis.

Orig Pub: Probl. tuterkuleza, 1958, No 1, 117-118.

Abstract: The observations were conducted in the northwest
(above the Arctic Circle) and southern regions of
the Kola peninsula. The number of occurrences of
pulmonary tuberculosis did not have sharp fluctu-
ations according to months; however, in the period
of Arctic night, the disease rate is somewhat
higher than in August.

"Correlation Between the Hydrolysis and Oxidation Processes in Evaluating the Freshness of Pork Fat"

Bucharest, Revista de Zootehnie si Medicina Veterinara, Vol 16, No. 6, June 1966; pp 76-83

Abstract: "English summary modified? Study shows that the peroxide index is the best criterion of freshness of porcine fat. For most reliable evaluation, both the acidity and the peroxide index need to be determined. Review of literature and study in a Bucharest slaughterhouse, with 5 specimens kept at room temperature, in refrigerator and in conditions of intense aeration for up to 62 days. 3 tables, 2 Soviet, 4 Rumanian references.

Title : Abortion in Sheep Caused by Vibrio Foetus.

Orig Pub : Probl. zootahn. si veterin., 1956, No 3, 55-59

Abstract : Abortions in ewes, caused by *Vibrio foetus*, were observed on two farms. At one farm, the number of abortions amounted to 7% of all pregnant ewes. The injection of a 24-hour culture of *Vibrio foetus* into the vagina and abdominal cavity of two pregnant guinea pigs did not produce abortions.
